
NOTES:

1. BT1: CR2032 3 V coin cell in BS-2-1 holder (bottom side).
2. D1, D2: self-cycling RGB LEDs (PARALIGHT L5T47UW5C-AHV), in parallel.
3. No series resistor - the coin cell internal resistance limits LED current.
4. PCB layout v0.1 (designators and nets synced from this schematic).
